ABOUT PRESENS (Pushing REmote SENSors)

PRESENS delivers real-time environmental data from sensors located in remote locations to publicly accessible databases at the Department of Water Resources (DWR). PRESENS was designed, tested, and installed by DWR's data and technology professionals, hydrologists, and technicians with the intent of expanding data collection capabilities at a fraction of the cost of traditional means. Data collected by PRESENS units can include water levels, precipitation, soil moisture and temperature, barometric pressure, and air temperature.
