

## MINUTES OF A MEETING

of the

## STATE WATER CONSERVATION COMMISSION

Held in Bismarck, June 23, 1941, in the Office of the Commission

The regular meeting of the Commission was called to order at 10 A.M. Monday, June 23, 1941, by the Vice Chairman, Henry Holt.

The Secretary called the roll with Commissioners Holt, Dahl, Thompson and Simons present. Governor Moses, was absent.

Since each member had received a typewritten copy of the minutes of the last meeting of the Commission held May 8, 1941, and there being no corrections or additions, it was moved by Comm. Thompson, seconded by Comm. Simons, that the minutes of the last meeting be approved. The motion carried, all Commissioners voting aye.

Each member having received a typewritten copy of the minutes of the Public Hearing held by the Commission May 8, 1941, to gather information regarding various projects in the state, and there being no corrections or additions, it was moved by Comm. Thompson seconded by Comm. Simons, that the minutes of the hearing be approved. The motion carried, all Commissioners voting aye.

Each member of the Commission was given a copy of a typewritten report of the National Resources Planning Board meeting held in Omaha, Nebraska, May 23-24, 1941, by the Secretary, John T. Tucker. Mr. Tucker reported verbally on the meeting stating that the most important action taken at the meeting was the appointment of an executive Committee. Mr. P. H. Elwood was elected Chairman, and Dr. T. Hillard Cox, Secretary. He stated further, "We were fortunate in having Dean H. L. Walster, Fargo, put on that Committee".

Dr. T. Hillard Cox, Senior Planning Technician, National Resources Planning Board, Omaha, Nebraska, came into the meeting to discuss the "Six Year Shelf of Projects." His remarks were as follows:

"Mr. Chairman, knowing that you have a long agenda today I will outline briefly that portion of our program in which we are mutually interested.

Under the Employment Stabilization Act of 1931 and by Executive Order the National Resources Planning Board has been given the task of preparing a comprehensive program for the conservation and development of the Nation's resources. Included in this over-all plan will be the formulation of a six-year program of public works. The Omaha Field Office will prepare this program for the region which embraces the states of North Dakota, Minnesota, South Dakota, Montana, Iowa, Nebraska, Kansas and Missouri

The public works program, which your Commission is particularly interested, will include not only the current programs of the various local, state and Federal agencies but will involve the preparation of a "shelf" of projects which can be used to assist in the stabilization of employment after the present defense emergency is over.

We have followed closely the program of the North Dakota Water Commission.

and know that you have made good progress toward the formulation of a water plan for the state. Mr. Tucker has just shown me a long list of worthwhile projects which to you have included in your program. We hope that this program of yours can be incorporated into ours along with those of other state and Federal departments. Without it ours would be woefully incomplete since we feel that your projects, when constructed, will go a long way towards the rehabilitation of a large section of the Great Plains area.

This "shelf" of projects that we have been required to prepare will not be just another inventory of all possible works of every description as was done in 1936 and 1937. The intent behind the passage of the Employment Stabilization Act, involves the integration and coordination of all projects into a comprehensive program that will result in the conservation and development of the natural and human resources of the area. Projects proposed will not be included unless they are of significance in the regional and national programs.

In order to determine the status of projects that are to be included an evaluation procedure has been established as follows: The procedure will vary somewhat according to the type of work to be done, but in the case of water projects, (1) they will be sent to the National Resources Planning Board in Washington or the appropriate Field Office, (2) they will then go through the National Resources Planning Board Field Office to the appropriate Drainage Basin Committee for review and priority rating according to the schedule which I will present presently, (3) after drainage basin committee review is completed the Regional Office of the National Resources Planning Board will fit them into the Regional Development Program with proper ratings from the standpoint of the region as a whole, (4) the Water Resources Committee of the National Resources Planning Board will make its final evaluation on a national basis and (5) the projects will then be sent to the Bureau of the Budget for transmittal to the President and to the Congress. The rating schedule which has been set up is as follows:

The first step would be the classification of projects into functional categories such as:

- 1. Water use and control
- 2. Land development
- 3. Transportation
- 4. Power development
- 5. Defense
- 6. General facilities
- 7. Others

For all projects in each classification, priority ratings will be established as "A", "B", "C", or "X", according to the following rating schedule:

Group A will include projects which are recommended for early construction. They are considered economically feasible and do not conflict with any other regional, state or local development plans for the function, area or activity involved.

Group B will include projects which should be deferred because, although they are considered economically feasible, they conflict with other regional, state or local development plans. As soon as further investigation is made which demonstrate their freedom from such conflict, they will be placed in group "A".

Group C will include projects which are not economically feasible and may or may not conflict with other regional, state or local plan. As soon as they become economically feasible and all conflicts have been resolved, they will be placed in Group "A".

Group X will include projects that lack sufficient data at the present time to determine feasibility. After further investigation, if they are found to be economically feasible and have no conflicts, they will be placed in group "A".

I wish to point out that the rating given each project as it is routed through the above procedure, required by law and by Executive Order, is in the form of a recommendation and is not mandatory. The adequacy of the evaluation process, however, is recognized by the Bureau of the Budget and the evaluations made are usually accepted without question.

If your Commission sees fit to work with us in this undertaking the information needed on each of your projects is (1) name and location, (2) name of proposing agency, (3) estimated cost of construction for each of the six years and (4) a set of the engineering plans if available. As soon as definite procedure has been established uniform forms will be provided for securing this information.

I am very glad to have had the opportunity of meeting with you today and discussing the responsibility that has been placed on all of us. We feel that it is as much your program as ours and we hope you will give whatever assistance you can in making this worthwhile undertaking a success.

I have hurried through this discussion and realize it is an incomplete statement. If there are any questions will be glad to answer them to the best of my ability.

Mr. Simons: Is there any procedure which you would suggest for this Commission and its executives to undertake?

Dr. Cox: This public works program is to be carried on by our Field Office and with the assistance of the Missouri Valley Regional Planning Commission. Governor Moses has appointed Mr. Tucker and Dean H. L. Walster to represent North Dakota on the Commission. The Regional Commission will no doubt appoint a special committee to handle this work and it is expected that there will be a meeting soon. You might wish to take the necessary action which will allow you to cooperate with the Field Office and Regional Commission.

Mr. Tucker: Will you explain to the Water Commission that the North Dakota representatives on the Missouri Valley Regional Commission can only follow what the five members of the Water Commission want. Can you define the status of the Water Commission for us? Is it not true that the Water Commission is "at the top of the heap" in North Dakota.

Dr. Cox: That is right. The water Commission is the one state agency with which we can work as far as the water problems are concerned.

Mr. Simons: I think we are authorized by law to do general planning relating to land and water problems so that it seems to me that if we are going to take it on in part that we are going to have to take it on in full and supervise it.

Dr. Cox: We are glad to hear that.

(It was suggested that Dr. Cox should have a copy of the old Planning Board law, a copy of the law cancelling it, and a copy of the present session laws. Dr. Cox stated that he did have a copy of the old planning Board law, but not the others.)

Dr. Cox: In regard to this program of ours--the states that have their plans prepared will have the advantage when these things start. North Dakota is further ahead in this respect than most of the other states in the region.

Mr. Simons: This is supposed to be organized on basin proportions, isn't it?

Dr. Cox: In regard to water projects, the first step is the evaluation for each drainage basin.

Dr. Cox suggested that one of the first things to be accomplished under the Regional Planning Commission was the formulation of some sort of a Missouri River Compact.

Dr. Cox told the Commission that they might be able to furnish some technical help through the services of the Water Consultants and the Regional office staff.

Mr. Simons suggested that Dr. Cox recommend that industrial and Land programs clear through the Water Commission as well as the water problems.

Vice Chairman Holt stated that he was certain that the Commission would give all the cooperation possible to this program."

The Secretary gave a verbal report on the Tri-State Waters Commission meeting held in Fargo, May 9, 1941. Mr. Tucker stated that he has been asked to take over the duties of H. F. McColly, former Secretary of the Water Commission, as Assistant Secretary of the Tri-State Water Commission, and had agreed to do so.

It was moved by Comm. Simons, seconded by Comm. Thompson that the report be accepted and the minutes of the Tri-State Waters Commission meeting be approved and placed on file. The motion carried, all Commissioners voting aye.

Comm. Thompson was asked to report on the progress of water conservation development in the James River Valley. Comm. Thompson was authorized to take charge of the organization of this development at the last meeting of the Commission.

Comm. Thompson stated that he had gone to Jamestown after leaving Bismarck following the last meeting of the Commission, May 8, 1941, and had contacted the Secretary of the Chamber of Commerce, Mr. Orlady and others. They were interested in forming a James River Valley Association. Comm. Thompson stated that he had been assured that the Secretary of the Chamber of Commerce would take care of anything needed, and Comm. Thompson had suggested that the meeting be held in Aberdeen, and that it be held the first part of June. Comm. Thompson said he had written to Mr. McArthur of Huron.

and a short time later had received a letter from the President of Mr. McArthur's company stating that he was out of the city and would not return until sometime in June. As yet Comm. Thompson stated he had not heard from Mr. McArthur, but would write to him again if he had no letter from him when he got home. The people in Jamestown are very enthusiastic about it, stated Comm. Thompson.

Comm. Thompson was instructed by the Comm. to go ahead with the work of organization.

The Secretary read letters from F. O. Hagie and Secretary of the Interior Ickes, regarding Fort Peck Dam. Each member of the Commission was given a copy of the letter Ickes received. The letters were ordered received and placed on file.

Mr. Tucker discussed with the Commissioners the War Department's unfavorable review of the "308" report, Little Missouri River and tributaries, Wyoming, Montana, South Dakota and North Dakota. He stated that letters had been written to the National Rivers and Harbors Congress and the Army Engineers asking for an extension of time to submit additional data.

The Secretary read a letter from W.L. Hayes, General Sales Manager, Montana Dakota Utilities, Minneapolis, regarding a proposed new contract for the Lewis and Clark Project power. It was suggested that the matter would have to be taken up with the Lewis and Clark Irrigation District, and that W. L. Sloan, Engineer, Bureau of Reclamation, might be able to give some advice on it.

The Secretary presented each member with a copy of a list of the Commission's projects and their financial status. There was a discussion of which pumping equipment should be reclaimed by the Commission. It was moved by Comm. Thompson, seconded by Comm. Dahl, that the matter be referred to the Secretary of the Irrigation Committee with power to act. On roll call the motion carried, Comms. Holt, Simons, Dahl, and Thompson voting aye. Absent, Governor John Moses.

After a discussion of the fact that the Commission had been unable to hire Arthur Schulz as Extension Irrigationist, and could not locate any other suitable candidate for the position, it was moved by Comm. Simons, seconded by Comm. Dahl, that the Commission ask the North Dakota Agricultural College to instruct their County Extension Agents to take over Extension work on irrigation projects in their counties. The motion carried, all Commissioners voting aye.

The Secretary reported verbally on the Bismarck Project #215. He stated that W. G. Sloan, Engineer, Bureau of Reclamation, and Mr. Burke, legal expert, Bureau of Reclamation, would be in Bismarck, Wednesday, June 25, 1941, to discuss the project with landowners.

The Secretary reported that L. T. Orlady of Jamestown, had come to the office requesting information to be presented to the American Legion Convention. Various materials had been gathered and turned over to Mr. Orlady. The American Legion passed a resolution commending the work of water conservation and \$500.00 had been appropriated for the Legion's committee which was appointed to cooperate in water conservation work.

The Secretary was instructed to send a letter of thanks and appreciation for their offer of cooperation to Jack Williams, Adjutant, Fargo, and a copy of the letter

to Mr. Orledy.

A petition from the Flasher Village Board of Trustees and Flasher Chamber of Commerce was presented to the Commission by the Secretary. It was moved by Comm. Simons, seconded by Comm. Thompson, that the petition be acknowledged and placed on file with other material on the Heart River Project. The motion carried, all Commissioners voting aye.

The Secretary reported verbally on irrigation meetings held in Mandan, Beulah, Glen Ullin and New Salem during the past month.

Each member of the Commission received a copy of the financial statement as of May 31, 1941, a copy of which is attached hereto.

The Commissioners also received a report of the financial status of the Commission as of June 23, 1941, which copy is also attached.

The Secretary was instructed to get an opinion from the Attorney General as to whether funds left in an appropriation, which have been allocated by the Commission for a specific project, can be paid out after July 1, and charged to that appropriation, or without voucher presentation. He was also requested to get an opinion as to whether or not the Bond Guarantee Fund is a revolving fund.

At noon the meeting was recessed until 1:30.

At 1:30 P. M. the Commission reconvened with Comms. Holt, Simons, Dahl and Thompson present. Governor John Moses, Chairman, absent.

The Secretary reported that Jesse Brehden had been hired to act as Assistant Engineer. It was moved by Comm. Dahl, seconded by Comm. Simons, that Mr. Brenden's employment be approved and that starting July 1, 1941, his salary be \$175.00 per month. On roll call the motion carried, Comms. Holt, Simons, Dahl and Thompson voting aye. Governor Moses, absent.

Each member of the Commission was given a typewritten copy of the report made by Vice Chairman Henry Holt on his trip to Washington, May 12-16, 1941. He supplemented it with a brief verbal report. The report was ordered received and placed on file.

There was a discussion of the present status of the proposed Reconstruction Finance Corporation Loan on the Yellowstone Pumping Project # 214. Mr. Tucker stated that he was going to lower the construction cost in another attempt to secure the loan. Mr. Simons suggested that it might be possible to secure some of the labor from the people who live on the project.

The new biennium and the coordination between the State Engineer's department and the State Water Commission was discussed. It was moved by Comm. Simons, seconded by Comm. Thompson, that the Governor and the Secretary be authorized to make such re-organization in personnel of the Commission as may be necessary after July 1, in order to comply with the new law making the State Engineer's Department a part of the Water Commission, and the new appropriation of the 1941-43 biennium. On roll call the

motion carried, Comms. Holt, Thompson, Dahl and Simons voting aye. Governor Moses, absent.

The Secretary reported that new letterheads were to be printed soon and asked if the Commission knew of any proposed changes. The Commissioners told him that the terms of S. W. Thompson and Einar H. Dahl, were finished July 1, and they suggested that Mr. Tucker write the Governor calling this fact to his attention.

The Secretary reported that the City of Dickinson had requested surveys of a site for a proposed reservoir and that A. S. Anderson and Roy Tyson had been sent out to do the surveys.

The Secretary reported that he had been contacted by the State Director of the Works Project Administration regarding dams in the state--that there must be some agency in the state to take care of the repair and inspection of the dams. The Secretary was instructed to formulate a program of steering work through the Commission's office, but securing help from the counties. He was instructed to report to Mr. Moodie, State Director, WPA, that all the Water Commission can do is to attempt to furnish engineering and get local interests to furnish materials, and to write to the various counties telling them that the Commission is lacking funds but will be glad to help with engineering work.

Mr. Tucker told the Commissioners that it was planned to have Series D bonds, Sioux Irrigation Project, printed next week.

Mr. Tucker reported that negotiations for a North Dakota-South Dakota compact, were underway.

The Secretary reported that Mouse River meetings were to be held October 8 and 9, 1941, in the Governor's conference room.

E. C. Beede of Morrystown, South Dakota, came into the meeting. He stated that he represented the Grant County Cooperative Grazing Association. He spoke to the Commission regarding the Dickinson Dam. He explained that there was some resentment by farmers of the business men who are taking matters into their own hands on this project without consulting the farmers as to their wishes in the matter. He stated further that he believed some sort of an educational program is necessary to convince the farmers of the need for irrigation. Comm. Simons explained that it is difficult for the Commission to send someone out to contact hundreds of farmers but that at any time meetings were held someone representing the Commission will be glad to attend the meeting and explain the program of the Commission and the need for irrigation. He further explained to Mr. Beede that the business men in Mandan had been contacted, when it first began to appear that the Heart River Project might have a chance for construction, because it was easier to contact them quickly. It was then thought that they would contact the farmers. Comm. Simons assured Mr. Beede that the primary purpose of the dam, if it is built is for irrigation, flood control, etc. and that the opinion of the farmers in the matter is very important. Mr. Beede was informed that the Commission would not have any funds for going out and promoting irrigation over the state, but suggested that the farmers might get together through their township organizations or perhaps their chamber of Commerce, and then someone from the Commission would be glad to come. The farmers might also contact the North Dakota Agricultural College for Educational help, it was suggested to Mr. Beede. Mr. Beede then left the meeting.

Governor Moses came into the meeting.

There was a short discussion as to priority of projects. C. F. Kelsch was called into the meeting and when he came he was informed as to the present status of the proposed priorities.

Governor Moses reported that as yet he has not been successful in promoting a meeting between various states to discuss a Missouri River Compact but that he would contact various governors regarding the matter. He suggested that Mr. Tucker take a trip to Montana to renew his acquaintance with the Montana Water Commission.

Judge Christianson came into the meeting.

There was a discussion of the housing situation on the Lewis and Clark Project. The Judge reported that Mr. Chamberlain of the Farm Security Administration, had been in Bismarck, and had stated that the FSA is getting ready to do some building on the project this year.

Comm. Simons suggested to Judge Christianson the possibility of the Rural Rehabilitation Corporation's selling the Lewis and Clark Bonds or the Sioux Project bonds, and using the money to build more projects. Judge Christianson stated that he thought there might be a chance of such action on the Sioux Bonds but that the Lewis and Clark bonds were to be cancelled. There was a general discussion as to whether it would be easier to sell bonds on a project already constructed or to sell them with the idea that the person buying them was making possible the building of something that could not be built otherwise.

There was a discussion of the Kyes Project. Mr. Tucker stated that it would cost about \$35,000.00 to build the project.

Mr. Acker came into the meeting. He brought out the fact that in selling bonds you have to have more than a blueprint of a project. It is necessary to have an election authorizing the issuance of bonds, go to court and have them declared duly issued, etc., and go through the procedure the law required, so if any bonds examiner examines them they will pass inspection.

There was a general discussion of ways and means of selling the bonds. It was suggested that the American Legion, people living near the project, and organizations in the state might buy bonds.

There was also further discussion of the Kyes project and Judge Christianson suggested that the people on the project might be able to do most of their own land leveling.

It was finally decided that Judge Christianson and Mr. Simons go to the Bank of North Dakota to see if it is possible to sell bonds.

The Secretary asked Judge Christianson if he had any more information as to the possibility of the Secretary of Agriculture turning the Lewis and Clark Project over to the State of North Dakota, as Judge Christianson had suggested might be possible. The judge stated that he doubted if the case was quite as hopeful now with

the Buford-Brenton Project under construction but that he would suggest that the Governor contact Mr. Baldwin in Washington, D. C., to see what he can do about it.

Judge Christianson stated that there will be 4,500 acres of land under water on the Lewis and Clark Project by July 15.

Mr. Simons asked if there is any legal objection to Judge Christianson's selling the Lewis and Clark or Sioux bonds and re-investing the money. The judge said there would be no legal objection, but that the R.R.C. would have to clear the matter with the Lincoln office, but he did not think there would be any objection.

Judge Christianson stated that L. T. Orlady, Jamestown, would be in Bismarck the next day and Comm. Thompson suggested that Judge Christianson talk with Mr. Orlady regarding the American Legion's selling bonds to their members, Judge Christianson said he would do that.

Mr. Tucker and Vice Chairman Holt suggested that if the Bureau of Reclamation could not build the Bismarck Project, an attempt to be made to build it with the assistance of the City of Bismarck and landowners on the project.

There being no further business, it was moved by Comm. Simons, seconded by Comm. Thompson, that the meeting adjourn to the call of the Chair.

Respectfully submitted,

*John T. Tucker*  
Secretary

ATTEST:

*John Wood*
